## Emergency Communication Device Provides Peace of Mind to Anyone in Need of Extra Security

*Com-Care Security Products and WSI work together to give revolutionary Voice-garde™ device multi-lingual Web exposure.*

Louth, United Kingdom, May 07, 2006 --(PR.COM)-- Louth-based Com-Care Security Products has taken personal healthcare safety to a new level with the introduction of their new speech pendant pull-cord product, Voice-garde™. The company has recently launched a dynamic website available in seven languages, created and maintained by WSI. The Voice-garde™ device is worn around the neck as a pendant, and is the only system of its kind to house both a microphone and loudspeaker, enabling hands-free, loudspeaker, two-way communication. This breakthrough technology will benefit anyone who could find themselves in an emergency situation at a moment's notice, especially the elderly, physically challenged, and chronically ill. The Voice-garde™ system will be featured at the International Fire and Security Exhibition (IFSEC) at Birmingham NEC Arena from the 8th to the 11th of May.

Extensive information is available on Com-Care's new website at [www.com-caresp.co.uk](http://www.com-caresp.co.uk). It highlights features such as:

- The Voice-garde™ home unit has the means to automatically dial out to a user-designated monitoring centre, or any of ten pre-programmable emergency contact telephone numbers and can even interface with additional hardwired peripherals, such as external security/medical sensors or systems.
- The wearer has access to hands-free, two-way communication within the boundaries of the wireless operating system.
- The speaker housed within the pendant or pull-cord automatically operates in loudspeaker mode.
- The volume level can be pre-set by the user depending on its intended use. Voice-garde™ is the most technically advanced social alarm system to date.

To help Voice-garde™ establish a Web presence, Com-Care Security Products' technical director, John Kingston, has enlisted the local WSI (We Simplify the Internet) Consultant, Chris Coney, to create a dynamic website, available in seven European languages. This state-of-the-art site will help market the Voice-garde system effectively online. The site features a full content management system to allow Com-Care Security Products to update their own site information at any time, with instant effect. This is will also list distributors of the Voice-garde system as they become available.

Chris Coney began his own WSI Consulting business working with local businesses in September 2005, a year after completing a degree in Computer Science and Business Information Engineering. The focus of Chris' business as a WSI Consultant is to simplify the internet for his clients by talking business and marketing rather than megabytes and gigabytes.

### About WSI:

Through its network of over 1500 offices in 87 countries, WSI delivers thousands of e-business solutions to small and medium sized businesses annually. Headquartered in Toronto, Canada, WSI provides affordable Internet related services and technologies that deliver maximum return on investment for businesses. As the world leader in providing profitable Internet solutions to SMEs, making information accessible for all via the Internet is an essential component of our offering. WSI is committed to assisting customers to ensure their websites are accessible for people with disabilities by providing education, guidance, tools and techniques that comply with the worldwide W3C standards.
